BRIGHTCHAMPS USA • Q4 2026 EXPANSION MANDATE

Scaling Inbound Volume to 5,500 Leads at $29.85 CPL via Geo-Marketing & Product-Tech

A Dual-Pillar Framework Combining Mutually Exclusive Geo-Targeting with Monotonic Meta CAPI v21.0 & Instant Intake

Stakeholder: Yatharth Sahoo (Senior Lead, Founder's Office) | Author: Bharanee B (AI Associate, Founder's Office | +91 7708221675)

FOUNDER'S OFFICE EXECUTIVE CANVAS

Executive Strategy Canvas: Single-Source-of-Truth Scorecard

RECONCILED CORE SCORECARD (MODEL SINGLE SOURCE OF TRUTH)

Qualified Leads: 5,500 Qualified Leads (Nov: 2,500 | Dec: 3,000)

Blended CPL: $29.85 USD (Spend: $164,175.00 vs $165,000 budget cap; $825 buffer)

Funnel Throughput: 3,723 Demos Booked (67.7%) -> 2,643 Attended (71.0% show rate)

Cost Per Attended Demo: $62.12 USD (North-Star KPI connecting media to attendance quality)

Paid Enrolled Students: 473 Students (17.9% demo close rate | 8.60% full-funnel lead-to-paid)

Round 1 US Calibration: Base 8.60% is modeled ~10% below Round 1 US actual (9.5%)

Net Booked Revenue: $367,550.00 USD (Net blended ARPU: $777.06 after promo dilution)

Revenue Less Media Spend: $203,375.00 USD (Direct gross margin after advertising)

Assumed Gross Margin: 55.0% (Assumed: 40% mentor payout + 5% platform COGS)

Contribution Margin: $37,977.50 USD (10.3% margin before closers, payment fees, refunds, creative)

First-Order Media ROAS: 2.24x (Substantially exceeds 1.82x break-even ROAS)

First-Order GM LTV/CAC: 1.23x ($777.06 x 55% GM / $347.09 CAC; excludes renewals)

TOP 2 STRATEGIC RISKS & MITIGATIONS

1. Q4 Ad Auction CPM Spikes: CPMs surge 40-60% during BFCM. Mitigate via front-loaded Nov 1-18 pacing, 50% Thanksgiving pause & $42 bid caps.

2. Weekend Peak Demo Demand: 1.6x weekend surge pushes demand to 74.4 hrs (>100% capacity). Mitigate via weekend daytime blocks (10 AM-3 PM) & 6 flex mentors.

THE IMMEDIATE ASK FOR LEADERSHIP

1. Budget Approval: Authorize $164,175 media plan ($77k Nov / $87.2k Dec).

2. Counselor Capacity: Confirm 16 dedicated US-shift mentors + 6 flex pool.

3. Holiday Voucher A/B Test: Authorize $150 voucher test vs premium control.

1. The Core Challenge: The Volume vs. Quality vs. Cost Trilemma

TRAP 1: THE CHEAP LEAD TRAP

$15 - $20 CPL

Meta lead forms optimized on volume attract low-intent clickers, grandparents entering wrong numbers, or kids without laptop access.

Result: Demo show rate collapses to <30%, burning counselor payroll on empty Zoom rooms.

TRAP 2: THE BOUTIQUE TRAP

$45 - $60 CPL

Hyper-narrow targeting on Silicon Valley engineers exhausts audience frequency rapidly and inflates auction CPMs.

Result: High trial conversion (25%+), but volume caps at <800 leads and blows far past the $30 CPL mandate ceiling.

THE FOUNDER'S OFFICE SOLUTION

$29.85 BLENDED CPL

A Dual-Pillar Architecture:
• Mutually Exclusive 3-Tier Geo Matrix balancing $36 tech hubs with $24 heartland volume.
• Server-Side Meta CAPI v21.0 optimized on Schedule + dynamic intake with OTP and instant calendar lock (<=48h).

2. Pillar 1: Compliant Diaspora Wedge & Advantage+ Control Arm

HOW DIASPORA & STEM AUDIENCES ARE REACHED COMPLIANTLY

Policy Context: Meta removed ethnicity and race detailed targeting options, and delivery is increasingly algorithmic. Direct ethnic targeting is prohibited. We reach high-propensity families through 6 operational proxies:

1. Value-Based Lookalikes from Paid US Customers: Seeded from paying customer lists; Meta ML organically skews to diaspora families based on behavioral and cultural signals.

2. Zip-Code Clustering in Premier School Districts: Top STEM school districts (Fremont 94539, Sunnyvale 94087, Frisco 75034, Edison 08820, Bellevue 98052, Alpharetta 30005, Cary 27519).

3. Academic Program Proxies: Parents (30-55) engaging with Kumon, Russian School of Math (RSM), Mathnasium, Singapore Math, USACO, and FIRST Robotics.

4. Community & Referral Channels: In Round 1, US referral leads converted at 11.9% lead-to-paid vs 9.7% for Meta. Amplified via dedicated parent referral loops.

5. Broad / Advantage+ Control Arm (10-15% Budget): Unconstrained algorithmic delivery to empirically test if geo tiers beat Meta's algorithm on Cost Per Attended Demo ($62.12 baseline).

MUTUALLY EXCLUSIVE 3-TIER GEOGRAPHIC MATRIX

Tier 1: Core Tech & Primary Metros (30% Vol | $36 CPL)

- SF Bay Area: Fremont, Sunnyvale, Cupertino, San Jose
- Seattle Belt: Bellevue, Redmond, Kirkland
- DFW Tech Wedge: Frisco, Plano, Irving
- NJ/NYC Metro: Edison, Iselin, Jersey City | Austin Hub: Austin, Round Rock

Tier 2: Affluent Suburban Corridors (45% Vol | $29 CPL)

- North Atlanta: Alpharetta, Johns Creek, Milton
- RTP NC: Cary, Morrisville, Apex | Chicago Suburbs: Naperville
- Northern VA: Fairfax, Ashburn | Orange County CA: Irvine
- Houston Suburbs: Sugar Land, Katy | Boston: Lexington, Newton

Tier 3: Inland & Heartland America (25% Vol | $24 CPL)

- Non-metro Sunbelt, Midwest, Ohio, Indiana, Michigan, Missouri, Kansas, Iowa, Wisconsin, Inland Pennsylvania.

3. Funnel Hypotheses & Single-Source-of-Truth Tier Economics

EMPIRICAL HYPOTHESES TO VALIDATE: Round 1 has no zip/income fields. Tier close rates (22/17/13%) and ARPUs ($850/$750/$650) are testable hypotheses to validate in Days 1-10.

Cohort / Parameter	Leads	CPL ($)	Spend ($)	Cost/Attended	Show Rate	Close Rate	Net Revenue
Tier 1: Tech & Diaspora Metros	1,650	$36.00	$59,400.00	$65.78	76.0% (903)	22.0% (199)	$169,150.00
Tier 2: Affluent Suburban Corridors	2,475	$29.00	$71,775.00	$60.06	71.0% (1,195)	17.0% (203)	$152,250.00
Tier 3: Inland & Heartland America	1,375	$24.00	$33,000.00	$60.55	64.0% (545)	13.0% (71)	$46,150.00
RECONCILED TOTAL / BLENDED	**5,500**	**$29.85**	**$164,175.00**	**$62.12**	**71.0% (2,643)**	**17.9% (473)**	**$367,550.00**

MATHEMATICAL PROOF & MONTHLY PACING:

- Blended CPL = (0.30 x $36) + (0.45 x $29) + (0.25 x $24) = $29.85 USD | Cost Per Attended Demo = $62.12 USD.
- Monthly Pacing: November (2,500 leads @ $30.80 CPL = $77k; 50% Thanksgiving pause) | December (3,000 leads @ $29.06 CPL = $87,175).
- Contingency Rule: If weekly blended CPL > $33, shift budget to Tier 2/3 suburban zips and referral channels before cutting volume.

4. Scenario Planning, Sensitivity & Break-Even Thresholds

Metric / Parameter	Downside (Stress)	Base Case (Target)	Upside (Outperform)
Blended CPL ($)	$34.33 (+15%)	**$29.85**	$26.87 (-10%)
Media Spend ($)	$188,801.25	**$164,175.00**	$147,757.50
Cost / Attended Demo ($)	$100.69	**$62.12**	$50.52
Show Rate (%)	55.0% (Ghosting)	**71.0%**	76.0%
Enrolled Students	262	**473**	585
Net Booked Revenue ($)	$193,880.00	**$367,550.00**	$447,525.00
First-Order Media ROAS	1.03x	**2.24x**	3.03x
Contribution Margin ($)	-$82,167.25	**+$37,977.50**	+$98,381.25

BREAK-EVEN THRESHOLDS (FINANCIAL GUARDRAILS)

Break-Even CPL: $36.76 (Max CPL before contribution turns negative: $367.5k x 0.55 / 5.5k).

Break-Even Gross Margin: 44.7% (Minimum GM to cover $164k spend: $164k / $367.5k).

Break-Even Close Rate: 14.5% (Minimum close rate required at 2,643 attended demos).

Break-Even Media ROAS: 1.82x (Base 2.24x provides 23% safety buffer above break-even).

CONTRIBUTION SENSITIVITY SCENARIOS

CPL Inflation ($34.00): +$15.2k contribution remaining

CPL Stress ($36.00): +$4.2k contribution near break-even

Round 1 Show (64.8%): +$20.4k contribution maintained

Combined Headwind: -$2.4k deficit (CPL $34 + Show 64.8%)

Severe Q4 CPM Surge: -$27.7k deficit (CPL $41.79 / +40%)

5. Pillar 2: Meta CAPI v21.0 & Monotonic Expected Values P(Paid)*ARPU

STRICTLY MONOTONIC CONVERSION VALUE CALIBRATION

Values represent mathematically expected downstream revenue P(Paid | Stage) x ARPU, dispatched per event via real-time webhooks (Meta rejects requests if event_time > 7 days old; no batch backlogs).

Geo Cohort	Lead	Schedule	DemoJoined	Purchase
Tier 1: Tech/Diaspora	$102.33	$142.12	$187.00	$850.00
Tier 2: Suburban	$61.56	$90.53	$127.50	$750.00
Tier 3: Heartland	$33.53	$54.08	$84.50	$650.00
Blended Average	**$66.83**	**$98.72**	**$139.07**	**$777.06**

CAMPAIGN OPTIMIZATION CONFIGURATION

Primary Target: 'Schedule': Meta delivers optimal machine learning with >50 events/week/ad-set. 'Schedule' generates ~3,723 events (~108/week/ad-set), comfortably exiting learning.

Why Not 'Purchase'? 473 purchases over 60 days across 4 ad sets yields only ~3.5 purchases/week/ad-set—too sparse for Meta ML. Optimizing for deeper events also raises CPL.

Value Signals for Target ROAS: 'DemoAttended' and 'Purchase' stream via CAPI v21.0 as offline conversion value signals to guide Target ROAS / Value-Based Bidding.

Privacy & COPPA Protection: Zero child data sent to Meta. Only SHA-256 hashed parent contact records (email, phone, state, zip) plus fbclid/fbc, fbp, client IP, and UA transmitted for deduplication.

6. Dynamic Landing Page, Qualified Bridge & Attendance Assurance

QUALIFIED LEAD BRIDGE

Gating Mechanics

Qualified = OTP-verified phone + parent email + laptop access.

- 90% Pass: 6,111 raw ($26.87 raw CPL)
- 80% Pass: 6,875 raw ($23.88 raw CPL)
- 70% Pass: 7,857 raw ($20.90 raw CPL)

Aligns with US Facebook education CPL benchmarks ($22.83 - $34.85).

MOCK TWILIO SMS OTP

Contact Integrity Gate

Parent phone numbers are verified via 6-digit SMS OTP (sandbox code 123456).

Structure mirrors Twilio Verify API for drop-in live deployment, eliminating fake VOIP entries.

VOUCHER A/B TEST TOGGLE

Pricing Psychology

A/B test $150 voucher ON vs OFF (Control) in Tier 1.

Ensures holiday discounting does not undercut premium brand perception among parents already paying Kumon-level rates.

ATTENDANCE ASSURANCE

Multi-Channel Cadence

Recommends 3 slots within 48h (lag vs show rate link is correlational) + weekend slot toggle:

- T-24h: Email invite & prep guide
- T-2h: SMS 1-click Zoom link
- T-15m: WhatsApp check-in
- Reschedule link prevents ghosts.

7. Operational Capacity: Time Zone Distribution & Peak Planning

Time Zone Region	Volume Mix %	Daily Demos	Peak Local Hours	FTE Mentors Req
Eastern (EST)	40%	25 Demos/Day	4:30 - 8:30 PM	7 Mentors
Central (CST)	30%	19 Demos/Day	4:30 - 8:30 PM	5 Mentors
Pacific (PST)	30%	18 Demos/Day	4:30 - 8:30 PM	4 Mentors
BASE EVENING POD	**100%**	**62 Demos/Day**	**46.5 demo-hours**	**16 Mentors (73% util)**
PEAK LOAD (1.6x Surge)	**Weekend Peak**	**~99 Demos/Day**	**74.4 demo-hours**	**>100% (Mitigated)**

CAPACITY MATH & PEAK SURGE MITIGATION

Average Daily Load: 3,723 demos over 60 days = ~62 demos/day (46.5 demo-hours needed).

Base Mentor Roster: 16 full-time mentors working 4-hour evening shifts provide 64 mentor-hours (73% base utilization).

Peak Surge Risk (1.6x): Weekend and after-school peaks surge demand to ~74.4 hours, exceeding 100% capacity of the evening pod.

Mitigation Plan: Open Saturday/Sunday daytime blocks (10 AM - 3 PM) and maintain an on-call pool of 6 flex mentors managed by the US Shift Lead.

8. Legal Compliance & Strategic Pushbacks Appendix

REGULATORY & PRIVACY COMPLIANCE

TCPA Compliance: Mandatory explicit consent checkbox on Step 2. Disclosure stating consent is not required for purchase, with one-click opt-out ('STOP').

COPPA Compliance: Strict parent-facing intake gate with guardian attestation. Zero child PII (name, age, grade) sent to Meta CAPI; only SHA-256 hashed parent records.

Meta Minor Guidelines: Ad targeting strictly on Parents Age 30-55. Creative emphasizes parental co-learning and academic enrichment.

STRATEGIC PUSHBACKS & DEFENSES

1. At $36 CPL, is margin wiped out? Blended break-even CPL is $36.76, while Tier 1 delivers $850 Net ARPU and 2.85x ROAS (22% close). Tier 1 CPL is capped at $42, managed via cost/attended demo ($62.12 target).

2. Why 71% show rate vs Round 1 64.8%? Demos within 24-48h showed 74-78% in R1 (correlational). Even at 64.8%, contribution is positive at +$20,386, and our 62% floor triggers phone confirmation gates.

3. What is LTV and renewal rate? On a GM basis, first-order LTV/CAC is 1.23x ($777 net ARPU x 55% GM / $347 CAC). Conservative model excludes renewals; US cohort data will refine lifetime value.

4. Meta removed ethnicity; why not broad? We agree direct ethnic targeting is impossible. A 10-15% broad Advantage+ control arm will empirically test if tiers beat the algorithm on cost per attended demo.

9. First-10-Days Test Plan, Pre-Launch Checklist & Leadership Asks

FIRST-10-DAYS TEST PLAN & KILL CRITERIA

Days 1-3 (Signal Smoke Test): Pilot spend ($2.5k/day) in Bay Area & Dallas. Verify CAPI EMQ > 8.0, raw pass rate (target 80% @ raw CPL <= $23.88), and slot sync.

Days 4-7 (Hook & Voucher A/B): A/B test 'Beyond Kumon' vs. 'Academic Edge' and $150 voucher vs control. Calibrate ad-set CPMs.

Days 8-10 (Throughput Audit): First 200+ completed demos. Audit show rate, cost per attended demo against $62.12 target, and initial Stripe transactions.

KILL / PIVOT CRITERIA:

- Trigger 1: If Tier 1 CPL > $42 after 150 leads -> Shift 50% budget to Tier 2.
- Trigger 2: If Booking Rate < 55% -> Activate fallback 1-step sticky form.
- Trigger 3: If Show Rate < 62% -> Mandate manual phone check-in at T-2h.

PRE-LAUNCH CHECKLIST & DECISIONS NEEDED

[x] Meta CAPI Pipeline: Verified with SHA-256 parent hashing & monotonic event values (v21.0).

[x] Mutually Exclusive Geos: Uploaded to Meta Business Manager with Advantage+ control arm.

[x] Landing Page Intake: Laptop access question, SMS OTP mock, guardian attestation & TCPA live.

[x] Campaign Optimization: Configured on 'Schedule' with 'Purchase' as offline value signal.

DECISION 1: Budget Approval: Authorize $164,175 media pacing ($77k Nov / $87.2k Dec).

DECISION 2: Counselor Assignment: Confirm roster of 16 dedicated US-shift mentors + 6 flex pool.

DECISION 3: Holiday Voucher: Approve $150 tuition voucher A/B test for BFCM.
